

A WHOLLY-OWNED SUBSIDIARY OF INTELLI-CHECK-MOBILISA, INC.™

Intelli-Check - Mobilisa, Inc. (AMEX: IDN), a leader in identity and wireless systems, announces its latest product, the IM 2700 - Transportation Worker Card Reader.

The IM2700 is a rugged, mobile, handheld computer which reads the newly-developed Transportation Worker Identification Credential, or TWIC. The IM2700 can quickly access ID card information via several methods including: 1D and 2D barcodes, magnetic stripe, smart chip, proximity or RFID, and biometrics.

Introduced by the Department of Homeland Security, the TWIC was created in an effort to better secure our nation's port facilities and will be required of all workers - such as truckers, longshoremen and other port employees - by April 15, 2009.

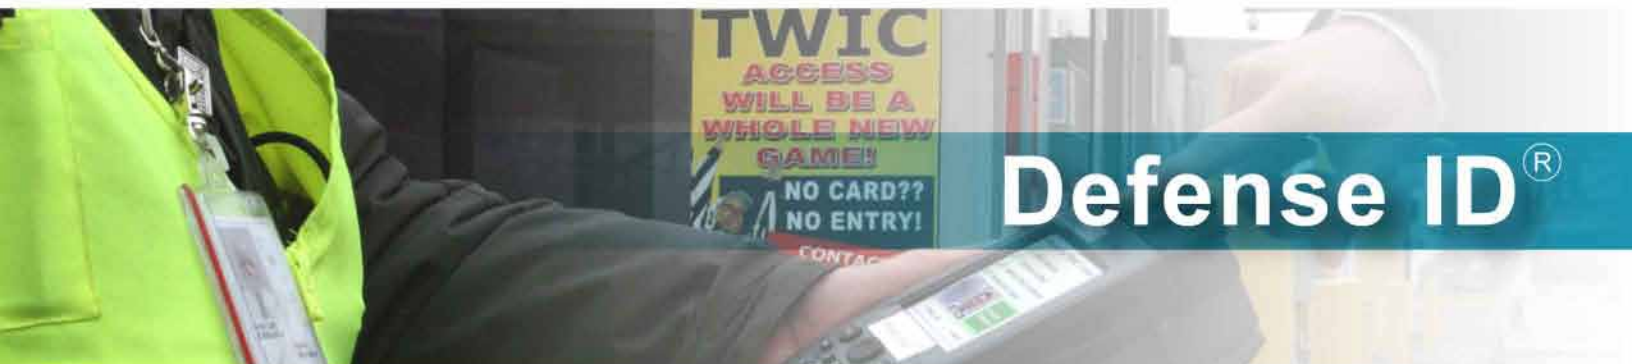

In order to obtain a TWIC, workers must pre-enroll at designated enrollment facilities and then submit to a background check, as well as submit biometric information such as fingerprints and photographs. The Intelli-Check - Mobilisa IM2700 system reads the encoded information on the TWIC card and verifies the information. Additionally, it has a built-in PIN capability and fingerprint matching to further verify the person's identity.

The US Government estimates that over 1.5 million transportation workers will be required to have TWIC cards.
