

FOR IMMEDIATE RELEASE

INTELLICHECK MOBILISA EXPANDS PATENT PORTFOLIO

Intellectual Property Investment Underscores Commitment to Innovation

JERICHO, NEW YORK – September 16, 2015 – [Intellicheck](#) Mobilisa, Inc. (NYSE MKT:IDN), a leader in identity authentication, verification and validation solutions, today announced the Company has acquired an intellectual property portfolio from the estate of Joseph Cipriano, an innovator in the field of identity verification. The portfolio includes four patents involving technologies for checking the validity of identification documents using a remote database. Certain patents in the acquired portfolio address the use of biometric information and identification credentials as part of the process to control access to a secured area. With the addition of the newly acquired intellectual property, Intellicheck now has an existing portfolio of 24 patents and an additional ten patent filings that are pending.

The portfolio purchase is the latest step in Intellicheck's efforts to extend its industry leadership. "Our goal is to be the innovation leader in all facets of identity authentication including hiring people and securing assets key to identity authentication. The addition of biometrics, part of this newly acquired patent portfolio, provides an additional technology to help authenticate and verify identities across all our markets. Expanding our intellectual property portfolio is a strategic investment that enables Intellicheck to bring enhanced functionality to our already robust products. We are constantly advancing our capabilities by integrating new types of identity verification technologies into our suite of identity-related products. Security issues have never been more important, whether the issue is law enforcement, accessing military facilities or authenticating the identification of retail shoppers," said Intellicheck CEO Dr. William Roof.

Dr. Roof noted that Company products, including Law ID™, Age ID®, Defense ID™, and Retail ID™, are showing increasing traction across target markets. "We believe we will see continued revenue growth from our affordable SaaS monthly pricing model, which is easily implemented and scales from small to large enterprises. We provide industry leading real-time information delivery capabilities that interoperate with all standard Departments of Motor Vehicles records and can also interoperate with customized and proprietary law enforcement data sources including the FBI's National Crime Information Center (NCIC). Intellicheck's custom analytics provide a dashboard of highly relevant information detailing potential threats and areas of concern."

Dr. Roof pointed to revenue for the second quarter ended June 30, 2015, which increased 91.5% compared to the same period of the previous year, as an important indicator of the success the current management team has had in revitalizing and focusing the Company's product line and in realizing important progress towards increasing shareholder value.

Intellicheck's authentication, verification and validation technology solutions are unique in their ability to provide accurate, real-time identification authentication and situational awareness that is fully regulatory compliant and easily integrated and customized into existing infrastructures including mobile devices. Its identity solutions support customers in the national defense, law enforcement, retail, hospitality and financial markets.

About Intellicheck Mobilisa

Intellicheck Mobilisa is an industry leader in identity authentication, verification and validation solutions in both the U.S. and Mexico. The Company holds 24 patents including many patents pertaining to identification technology. Its identity solutions support customers in the national defense, law enforcement, retail, hospitality and financial markets. The Company's products scan, authenticate and analyze components of identity documents including driver licenses, military identification cards and other government forms of identification containing magnetic stripe, barcode and smart chip information. Once extracted from the identity card, the information can be used to populate forms as well as provide safety, security and efficiencies throughout these markets.
