

FOR IMMEDIATE RELEASE

Intellicheck Mobilisa Announces Participation In the National Sheriff's Association 2017 Winter Legislation & Technology Conference

JERICHO, NY – January 31, 2017 – [Intellicheck](#) Mobilisa, Inc. (NYSE MKT:IDN), an industry leader in technology solutions that are the antivirus to the epidemic of counterfeit IDs delivering real-time threat identification and identification authentication, today announced it will participate in the National Sheriff's Association Winter Legislation & Technology Conference. The conference will be held February 4 to February 7 at the J.W. Marriott in Washington, D.C.

Intellicheck will exhibit (Booth #34) on the conference floor. The exhibits open February 5. Vice President of Sales Paul Fisher will be joined by veteran law enforcement and technology pro Michael McDonald, recently named business development manager for law enforcement solutions. During Intellicheck's participation at the prestigious gathering, Fisher and McDonald will be demonstrating the Company's acclaimed [Law ID™](#) and [Age ID™](#) technology solutions.

Law ID is the leading threat identification, identification authentication and contact status technology solution for local, state and federal law enforcement personnel. It was named a must have public safety app for law enforcement in 2016. Law ID delivers real-time authentication and vital information resulting from the scanning of barcoded identification documents such as driver licenses on smartphones or tablets. It enables officers to quickly view critical fields of information including Department of Motor Vehicle as well as federal, state and local criminal records without losing sight of the contact. The industry leading technology solution enhances officer and citizen safety by providing instant situational awareness, allowing an officer to quickly deescalate a potentially tense encounter. Law ID provides the most accurate and up-to-date data with authentication of all U.S. states, Department of Defense, Canadian province and Mexican states barcode formats. It offers extended search capabilities through fast integration with other government and custom databases.

Age ID is widely recognized by many in law enforcement as the most effective identity authentication and age verification technology solution available. Law enforcement efforts to curtail access to age-restricted products like alcohol, tobacco and marijuana available at establishments such as bars, restaurants and retail establishments and age-restricted venues such as casinos, have become an

increasingly difficult task. Technology has made fake and altered IDs so sophisticated that it is virtually impossible to spot them with the human eye. Age ID reads the barcode data encoded on driver licenses and government issued IDs, and instantly provides authentication of the ID. The identity authentication and age verification technology solution can be deployed on mobile devices including smartphones and tablets. It eliminates the need to call dispatch and the challenges associated with some environments. It draws on a comprehensive database, updated on an ongoing basis, to ensure information is timely and accurate. Age ID provides the most up-to-date solution to the problem of spotting fake and altered IDs with its ability to read more than 250 unique DMV barcode formats from every U.S. state, Canadian province and Mexican states.

Intellicheck Mobilisa is an industry leader in technology solutions that are the antivirus to the epidemic of counterfeit IDs providing virtual instant threat identification and identity authentication. Constantly evaluating fake barcodes, the Company builds and releases new software code to defeat new threats as they evolve. Intellicheck's technology solutions equip customers in the law enforcement, national defense, financial, retail, and hospitality markets with enhanced safety awareness of their facilities and people improving operational facilities and customer service. The Company's products read, authenticate and break down components of identity documents containing magnetic stripe, barcode and smart chip information.
