

Efficient and flexible access for better security

The challenge:

Control access without slowing operations

Enforcing restrictions for visitors accessing secure areas isn't easy, whether the location is a military base, office, factory, research facility or other venue. Ensuring that the solution in place meets security requirements is critical.

But how do you control access without slowing down lines at entry points? Also, what if a site has frequent visitors requiring credentials that restrict them to specific areas at designated times? That can really impede efficient access and enforcement of security rules. Intellicheck has the solution.

THE INTELLICHECK SOLUTION: Efficient access management with enhanced security

Intellicheck Access ID™ helps any facility that has restrictions on when and where visitors, vendors or staff can go operate more efficiently. Access ID makes it easy for staff members or security personnel to issue rules-based, customized badges that limit access to certain areas, and specific times. The rules can be configured easily, at any time—in response to anything from special events to a need for heightened security—with little time and effort.

Access ID also brings a new level of security to these facilities. Staff members simply scan the visitor's ID barcode using either a mobile device or existing system to instantly and accurately authenticate their identification.

Because Access ID can read more than 200 unique barcode formats from every U.S. state and Canadian province—with all data updated on an ongoing basis—you can be confident that the results are accurate and up-to-date. Access ID's capabilities can also be easily extended via integration with custom data sources.

Effective, efficient access control

Makes it fast, easy and efficient for a facility's staff to issue customized, rules-based access credentials that restrict visitors to specific areas, at designated times, or aligned with specific situations, such as increased threat levels. Rules can be reconfigured at any time.

Increases security and safety

Instantly authenticates identification using mobile devices or an existing system, ensuring that the person presenting the ID is authorized for access.

Accurate and up-to-date

Patented technology authenticates more than 200 unique driver's license, enhanced ID and military ID barcode formats from every U.S. state, Canadian province and the U.S. Department of Defense, with ongoing database updates to ensure data is always up-to-date.

Integrates with custom databases

Makes it easy to quickly extend authentication capabilities via integration with custom databases.

Expert consulting, optimal results

Available as a subscription service or customized solution. Plus, our professional services team of authentication experts can work with you to integrate Access ID with existing systems and custom databases, and design an analytics module for enhancing your operational insights.
