

Easier compliance, reduced risks

The challenge: Prevent alcohol and tobacco sales to minors

As the young man steps up to the counter with a six-pack in his hands, the clerk assesses his age and asks for ID. The young man hands over his driver license and the clerk gives it a quick look, checks the date of birth, sees he is of legal drinking age, hands the license back and rings-up the purchase.

The problem is, the ID is a fake. Or, even worse, the clerk did the math incorrectly and sold to a minor. Government agencies across the U.S. are increasingly making it the responsibility of the alcoholic beverage or tobacco products seller to ensure that every buyer is of legal age. The consequences of non-compliance are increasing, too. Fines, loss of liquor license, financial liability and potentially, criminal charges can be the result of selling to a minor. Intellicheck makes compliance easier.

THE INTELLICHECK SOLUTION: Instant ID authentication, ensured compliance

Intellicheck Age ID™ reduces the risks that come with selling alcoholic beverages, tobacco and marijuana by authenticating identification documents, like driver's licenses, using either a mobile device, or integrated into existing point-of-sale systems.

With Age ID, the clerk simply scans the buyer's ID barcode, and instantly knows if the ID is authentic, and that the person is of legal age to buy age-restricted products.

The authentication data includes highlighted fields in red, yellow and green so the clerk is very clearly alerted as to whether or not they should complete the sale. Age ID can even notify sellers if the same ID is being re-used within a preset amount of time, and to prevent repeated purchase attempts by minors, fake IDs can be reported with a single tap on the screen.

Reduces risks from underage sales

Eliminates errors associated with manual age checks by automatically verifying that a buyer is of legal age and that an ID is authentic, reducing the risk of fines, loss of liquor license or criminal charges. Makes it possible to report fake IDs with a tap on the screen.

Accurate and up-to-date data

The only solution that authenticates more than 200 unique driver's license barcode formats from every state and Canadian province. Automatically uses the latest ID barcode format information.

Ensures regulatory compliance

Includes regulatory-compliant audit capabilities for capturing valuable data such as a buyer's age and time of entry. Also enables export of historical data where permitted by law.

Extra features enhance value

Notifications alert sellers if the same ID is used within a set amount of time, and allow sellers to create VIP, banned or custom groups that notify clerks when group members are making a purchase.

Expert consulting, optimal results

Available as a subscription service, bundled (smartphone and software) or customized solution. Plus, our professional services team of authentication experts can work with you to integrate Age ID with existing systems and custom databases, and design an analytics module for enhancing your customer insights.
