

## Make every contact safer

### The challenge: Every contact carries risks

As the car in front of her makes an unsafe lane change, the patrol officer turns on her emergency lights to make the traffic stop. The car pulls over; the officer radios in the stop and walks up to the vehicle.

This is an uncertain moment, when the officer's training and experience comes into play. This is also a moment when situational awareness is critical, for the safety of both the officer; and the citizen. She approaches the contact, asks for license and registration, and the contact quickly complies. The officer walks back to her vehicle, enters the ID information into her computer, and waits for results.

At this point, that officer is vulnerable: it's virtually impossible to maintain visual contact while walking and entering data, and the officer's seated position limits her mobility. This common situation increases risks for both the officer and the citizen. Intellicheck changes all that.

### THE INTELLICHECK SOLUTION: Enhanced awareness, safer stops

Intellicheck Law ID™ enhances an officer's situational awareness by minimizing the loss of visual contact with an unknown person during a field contact. Because it's available on mobile devices, Law ID™ ensures the officer has one hand free at all times whether on foot, bicycle, horseback, motorcycle or in a car.

With Law ID, the officer simply scans the contact's ID barcode, and it is instantly authenticated on her mobile device. Critical data fields that indicate the threat level are highlighted in red, yellow and green, and visible at a glance. Having authenticated the contact's identity, the officer can act accordingly, immediately deescalating a potentially tense situation.

Best of all, when the officer returns to the station, Intellicheck makes reporting faster and more accurate by automatically populating standardized form fields from the data retrieved during the ID authentication, and from the mobile device's reporting features, including location and weather information.

### Increases officer and citizen safety

Works on mobile devices to minimize loss of visual contact during traffic stops while ensuring officers always have one hand free. Instantly highlights critical data fields that indicate the threat level based on DMV and criminal records search.

### Accurate, relevant mobile data at-a-glance

Checks license and vehicle status, state justice status including wants, warrants and domestic abuse restraining orders, active federal wants and warrants and "be on the lookout" notices, weapon ownership, and can display a contact's DMV photo along with dozens of other critical details.

### Faster, more accurate reporting

Significantly cuts incident reporting time by automatically populating standardized form fields, and reduces errors caused by manual entries, ensuring the higher degree of accuracy that is critical in cases that go forward to trial.

### Instantly accesses critical databases

Patented ID verification technology authenticates more than 200 unique DMV ID barcode formats, from every state and Canadian province, as well as State Justice Information Systems and the National Crime Information Center (NCIC) databases.

### Expert consulting, subscription pricing

Subscription pricing limits capital expenses, and customization is available from our professional services team of authentication experts, including integration with existing systems and custom databases, and adding analytics capabilities for a seamless solution.
